

Cylinder Head Tools

Pro Head CC Kits

Our kits provide everything you need to properly cc cylinder head combustion chambers, intake and exhaust runners, intake manifolds or cylinders.

- Precision glass burets are compatible with alcohol, parts washer fluid or virtually any liquid you may need to measure
- Scales are marked off in .2cc increments (except 250cc model) & actually reads out the amount poured, eliminating any math involved
- All kits contain a precision glass buret with integral petcock, a stand & clamp assembly, a flat plexiglass plate to cover the combustion chamber and instructions on how to properly cc cylinder heads

**Head & head holders pictured are not included.*

**Note: All glass burets must be shipped by air service.*

Sportsman Head CC Kit

If you only occasionally need to cc cylinder heads or don't need to be ultra precise, our Sportsman Head CC Kit is for you. It uses a 100cc graduated flask that measures in 1cc increments, so you can get fairly accurate results without the expense of a buret. This kit also includes a combustion chamber sealing plate and instructions on how to cc cylinder heads.

**Head & head holder pictured are not included.*

Rocker Stud Puller & Tap Guide

Our Rocker Stud Puller & Tap Guide fixture provides a convenient means to remove pressed in rocker studs. Just slide the tool over two side-by-side studs and crank down on the retaining nut to force out the stud. Then use the tool, with the supplied arbor, to ensure proper alignment when tapping the boss for screw-in studs.
